Heathcote Center Bought By Members

We announced it as our annual School of Living Workshop, but it was a ball, a blast and a truly significant five days for nearly 80 adults and 13 children. Work, discussions, planning and financial goals at the Aug. 24-28 meeting of School of Living members at Heathcote Center, near Freeland, Md., far exceeded previous experiences.

It was a real workbee, where an agenda of manual work got done, six discussions of practical problems, three especially challenging talks, a five-hour official business meeting, and much informal interchange filled our time to the brim.

Work Accomplishments

On the first morning, more than 30 persons listed 13 jobs that needed doing. Meal preparation and meal cleanup were done cooperatively under the able guidance of Dee Sprague, Grace Lefever and Rosetta Schuman, in which all women and some men, notably Ken Sprague, assisted. They provided steady and copious amounts of mighty tasty and nutritious food!

Big inroads were made on window sash repair and painting under Lee Rainer's persistence and skill, so that winterizing of the main section of the mill will proceed. Two broken stone walls were remade at the rear of the mill—one against the earth bank and one at the creek's edge, which adds space for garden and patio in this area. Earth was dug from the bank for construction

later of a greenhouse (the earth was transferred to front garden beds). Men, including a retired professor, women and children, assisted in this. Tim Lefever and Bill Anacker anchored 60 feet of eave trough to the second floor roof; John Susoreny painted the rafters of the shelter in the meadow and the girls painted the porch roof; most of the men helped clear away the wheelhouse and fill the hole with stones and dirt; the teenagers brought in a good many truckloads of winter wood, as well as refreshed themselves in the attractive new pool (behind a recently built dam in the creek). A few people built a patio in front of the mill house threshold, and scrubbed the chicken house for later use as housing. Many weeded and tilled the very productive garden.

Surprise:

A New Concrete Floor

But the biggest job of all was not even on the first list. As we discussed the use of the mill building, on Wednesday afternoon, it was clear that more room for staff would be needed soon. The best place, we decided, was on the ground floor. But the floor was rotten next to the stone wall; its north end was open to the wind. No matter: let's get a new floor in—now! At 4 p.m. the men and boys started on the room and carried out boxes, stored items, tools, etc. With picks and crowbars they ripped out the rotted floor boards

to the center supports. Then they dug out dirt beneath the floor sills so Bill Anacker and Evan Lefever could cut out these huge logs with a chain saw. By 9 p.m. a 12x40 ft. space (the half needing repair) was clear, and a yawning area awaited their energies next morning.

Very early, a dozen men became a wheelbarrow brigade and hauled in tons of smaller stones for fill beneath the concrete. By noon this was completed, and at 7:30 Saturday morning a huge truck arrived with 3 cu. yds. of ready-mixed concrete. This was just the right amount; and with shoveling, hauling, leveling and troweling a beautiful, smooth floor was completed.

In three work periods no one seemed to get in anyone's way. At times a gallery of onlookers enjoyed the process. No bossman seemed in evidence. Victor Le Breque said, "I've worked in all kinds of places, at all kinds of manual jobs. Never did I have part in such a wonderful work project, where the spirit was so fine and the accomplishments so worth while."

Wonderful

Financial Cooperation

The achievements in the financial area were equally encouraging. Attendants welcomed the report that \$1020 had been given by School of Living members in July and August for the Headquarters Building Fund (since increased to \$1287). Most of these gifts came in with the coupon

at the end of the ballot for trustees. It was soon apparent that members present who wanted a plot of land on which to reside in the Heathcote Community were willing to invest larger sums. When it was discovered that \$5,000 was available from such persons, another person offered a 5 year loan of \$1,000 at 1% interest and another offered to loan for 1 year at 3% any sum necessary to reach the full payment of \$12,500.

The area to become the School of Living property, as surveyed by Ken Kern, of Oakhurst, Calif., includes 37 acres and five buildings. Persons giving \$1,000 or more have the right to use one small homestead plot. At last report, those wanting to be in this group include John Bischof, Mildred Loomis, Catharyn Ellwood, C. F. Eicher and James Iden Smith. Members who will provide low-interest loans are Philip Smith and Leo Rainer. The transfer of property will be made by the end of September.

On Sept. 1, a summary of the Building Fund showed that we had:

Small gifts from members	\$1250
Pledges from Members	450
Large Investment-Gifts	5000
Low-Interest Loans	5800

Purchase Price \$12,500

Thanks and appreciation are extended to all who have made possible the new center for School of Living activities. Sev-

eral members uniquely expressed their involvement. Lewis and Naomi School, Spencerport, N. Y., sent \$40 and pledged \$100 more "if a down payment is made." Lamar Hoover, New York City, pledged \$10 a month until the project is paid off. Rabbi Gendler sent \$72 or \$6 a month. Etc. All who have not yet made their pledge or contribution are urged to send it soon.

Survey and Sites

Ken Kern, architect and surveyor, has drawn up a plot plan. Of the total 37 acres, about 20 adjoining the mill building (meadow, woods, garden space) will constitute the School of Living homestead, for common use. The north half, 17 more open hillside acres, can be divided into 10 homestead sites (with necessary roads and access). Some of them are to be multiple units around a court, for non-family persons (some of whom will be School of Living faculty). Land-use, leaseholds and other community policies will be developed by the persons who take up and use these sites, as part of the School of Living. Any who are interested should write soon.

Discussion and Plans

On Thursday evening, Catharyn Elwood, author of *Feel Like a Million*, reported on her 1966 group tour to organic farms and health spas in Europe.

Friday evening, C. F. Eicher proposed a School of Living (continued on page 2)

SCENES FROM 1966 ANNUAL SCHOOL OF LIVING WORKSHOP. On left, participants in an afternoon discussion. In center, Eugene Obidinski and Ken Sprague repair a rock wall. On right, Harold Lefever and son Danny are looking over the mill wheel area.

To Florida and Back, Part V—

You Can Raise Food In the City; You Can Be A Philosopher, Too

By Sam Eisman

In my previous articles I have described the difficulties we encountered in building-it-ourselves. I trust I haven't discouraged the would-be builder. I tried to show how my desire to be free of a mortgage led to overcoming these difficulties. I hope strong motivation to eliminate mortgage costs and dependency will give others strength to do their own building. Here I would like to present our food-raising program on our small area, now within Miami city proper.

"It's a tight little world" I've often said, when my wife professed surprise at my knowing the many people who are interested in health through natural means. It was through my acquaintance with Dave Stry, when he operated a natural hygiene health resort in Melbourne Village (1946-58), that I learned of the School of Living. Imagine

my surprise and delight to find that there was an organization promoting the homestead idea. This was an idea I had never forgotten though for years it had not received any external encouragement.

While I have planted a vegetable garden for about seven years, it has been 15 or 16 since I planted our first mango tree in the quest for home-produced food. So occasionally that propensity for homesteading rose above the surface of conventional living even back then.

"Oolite" Soil

One of the professors at the University of Miami said that man came to South Florida a million years too soon; that nature needed that much more time to build a real soil. Instead, what we now have is a leached out sea sediment — a calcareous sand with pockets of porous limestone

(continued on page 4)

Community To Form in Michigan

Twenty adults benefitted from lively exchange and a helpful program at the second annual meeting of Michigan School of Living members, Sept. 9-11. All enjoyed the hospitality of Mrs. Joy Valsko at Candle Lights Center, near Sutton on Traverse Bay.

As last year, we hiked over the orchard and pine-covered acres sloping down to the water, and rejoiced that this land is still available at low cost for a community of homesteaders and regional School of Living. One young couple has spoken for a site, and others are considering it. Anyone interested is encouraged to write soon to Mrs. Valsko, 516 W. 7th St., Traverse City, Mich. Two to five acre plots are being arranged, with a larger acreage considered for cooperative orchard. The motel-like building at Candle Lights, with units for several families, contains looms and other craft equipment.

This area is the cherry center (continued on page 3)

JUBILANT READER

"Bravo and congratulations as School of Living comes in fast on the home stretch with purchase of the Heathcote acres and buildings for a new Center." — Russel Jaque, New Mexico.

COOPERATIVE READER

"It is splendid that the new Mill Center will provide a central meeting place for School of Living adherents. But every home that receives School of Living publications can become a center of right education (as against the almost universal 'mis-education' today) and a center of adult discussion, etc. We can all introduce our friends to School of Living, write to editors and news commentators, send out sample copies and give School of Living books as gifts. Enclosed is my check for more copies of three books." — W. C. Lloyd, Burlington, N. C.

Briefs From Brazil

By C. S. Dawson

From Thoreau: "This curious world . . . is more wonderful than it is convenient; more beautiful than useful; it is more to be admired than it is to be used."

In all of my teaching I rise to the philosophical bait of each lesson, and I strive to induce them to ponder the heights. Often I attack the orthodox opinion and to do so down here it is necessary that I put it indirectly.

"You know," I say, "there are many human beings, and some of them are very persuasive, who insist that when man moved into, or when he created, cities, he commenced his own suicide. Can anyone comment on this? Is this a reasonable statement?"

Or maybe I'll toss out a few notions concerning food. "You know there many human beings who live exclusively on raw food. Now, we may think this is silly, but after all, what do we mean by a 'fresh' apple if not one that is uncooked? What is a fresh head of lettuce if not one that is not about to decay, that has its maximum vitamins?"

Volume IV — Design and Structure The Owner-Built Home — Chapter 6 Cooking-Dining

By Ken Kern

(continued from last month)

The principal concept of New House cooking design is that storage for each of the major cooking centers of activity is provided at the point of first use. The major cooking centers are sink, mix, range, refrigerator, oven, and serve. Wall and base cabinets for each of these activity centers should be the same length: about 4 feet for each unit, except those for the sink, which should be about 8 feet long. A wall cabinet provides a good place for indirect lighting (the light shining directly on the work counter). The usual center ceiling fixture gives light where it is least needed.

Much cabinet storage research has been done in recent years. Perhaps the most noteworthy is the work done at Cornell University. A type of "swing cabinet" is suggested. This is a compact cabinet made of sections that swing open like a book. Storage is one row deep, making each item easy to see and grasp. Only the item wanted has to be lifted out. Door storage is a sensible method of storing small food items, as well as small cooking utensils, spices, etc. Base cabinets with the usual stationary shelves should be avoided wherever possible. Shallow pull-out trays and drawers give far better visibility and greater ease of reaching contents. Heavy pots and pans are brought into easy reach and full view by pulling a tray forward. Vertical drawers are especially satisfactory below the sink, where the often-used dishpan, dish drainer, and brushes may be hung on hooks. A similar vertical drawer beside the range is handy for pans and covers. Vertical partitions or files can also be installed to advantage. Articles stored in these files are within easy reach and can be grasped readily. Overhead cabinets should have sliding doors wherever possible. They do not offer as full an exposure of contents as do swinging doors, but this possible disadvantage can be overcome by using glass-paneled doors.

A poorly designed cooking area costs as much to build as a good one. The popular "Pullman," or strip-type, cooking area, for instance, has traffic objections and is too long for convenient working. The L-shaped arrangement is better, especially when the range is located at the corner, where undisturbed cooking can be done. Probably the most practical and efficient cooking arrangement is the U-shaped plan. (A variation of the U-shape—a circular cooking arrangement—was found to require only 70 feet of walking to prepare a meal; the same meal in an L-shaped cooking area required 245 feet of walking.)

New House design concepts indicate a totally new and fresh outlook on cooking-room arrangements. The traditional window-over-sink, for instance, is now considered obsolete, as so little time need be spent at the sink. Cooking space is best lighted by clearstory or skylight, and the sink should be located near the dining area. Eating space or the mix center, however, might well utilize window exposure. In a good plan the cooking area is convenient to the garage as well as to the front entrance. Yet, entrances to the cooking area should be grouped to minimize through traffic.

Another New House design tendency is to "open up" the cooking area to form a sort of cooking-dining-family room area. This single-space arrangement does not isolate the housewife from the rest of the family or visiting company. The formal dining room of the 1920's has now shrunk to dinette to alcove to nook. Actually, the dining room can function better as a second group-living area, with the dining table itself set in an angled alcove. The dining table should be as close to food preparation as possible. It is also desirable to locate the table close to the sink for simplified cleanup. When food preparation and cleanup are separated from dining, a utility cart can become a useful device. The Cornell investigators designed a neat cart that holds service for eight persons.

Letters To The Editor

Lamaze Method

To the Editor:

Guess what I got for my birthday this morning? Rebecca gave birth to a beautiful boy! He came to us with nearly no pain to his mother. We used the Lamaze method of childbirth. As you probably know, its aim is to eliminate or to reduce contraction discomfort to a minimum and to let the mother completely participate in this thrilling experience.

In the previous three months I had monitored Rebecca in the various physical and mental exercises recommended by Lamaze

and his students. The only really difficult period we encountered was during the very demanding "transition" stage. She became very tense and it required several loud "commands" from me for her to regain control over the mounting contractions.

Not being drugged to insensibility, Rebecca could be fully aware of the progress of labor, and of course the exhilarating expulsion of the little fellow. I had tears of joy as Jordi slid out onto his mother's thighs. We padded him dry as he lay on Rebecca's breasts.

This occurred in our small cab-

in. Noticeable contractions began about 3:45 a.m. and six hours later he squeezed out. No doctor was present. We had decided that our self-training in childbirth was adequate to meet the challenge.

Our most useful ally in bringing Jordi into the world was a thin manual entitled *A Practical Training Course for the Psychoprophylactic Method of Childbirth*, available from the American Society for Psychoprophylaxis in Obstetrics, 164 W. 79th St., New York City. Several other books were also studied.

Do you know of anyone who can give us a bit of rational and health-minded information on infant vaccinations, check-ups and tests? In peace and revolution, Ferdi Knoess, New Harmony Homestead, Pennington, Minn.

Capable People

To the Editor:

From May through September I have had a wonderful experience in the United States, photographing for film strip firms and making contacts with people for our intentional community in New Zealand. Perhaps I can write up my experiences and impressions.

For me, the people are the most important factor. I try to avoid the neurotic, misdirected rebels, those who are more interested in shocking than in communicating. I avoid those who attribute all of their ills to their environment and none to themselves. For a community to get started, fairly mature individuals are needed. Only later can a group afford to welcome or help those with serious neuroses. I seek people who are keen to continue educating themselves in how to live. I find many intelligent people who welcome physical and sometimes menial jobs for part of their day. I believe it is a fallacy to assume that all educated, intellectual persons do not enjoy manual work. A balance of physical and mental activity is an ideal which many people want. This is a goal in our community. — G. R. (Dick) Roberts, Oamaru, New Zealand

New Experiments

To the Editor:

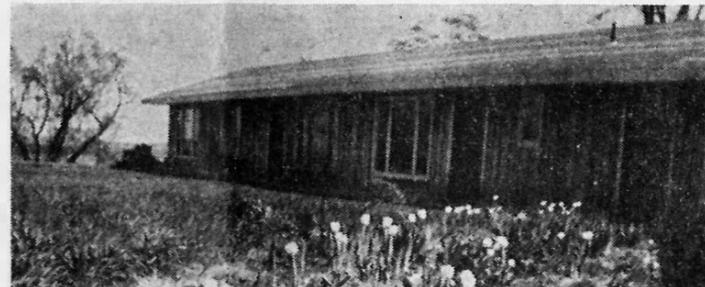

The newer intentional communities and homesteads, I believe, will increasingly include nudity, unmarried sex and psychedelics, as at Eden West, Kerista, Castalia (Millbrook) and other colonies which I have visited. While different age-sets of utopian libertarians may not endorse each other's personal life styles, it is important that we all keep in communication. Love, Jefferson Poland, Box 830, Berkeley, Calif. 94701.

Is It Farewell, Sweet Earth?

To the Editor:

How can we bear the steady

Community To Form, cont'd

WING of Candle Lights Crafts building, near Traverse City, Mich.

of the world, a beautiful and popular resort section, and the famous Interlochen Music Camp is within 15 miles. Employment of various kinds is also at hand, and the climate is ideal, winter and summer.

Program

Darrel Cole and Carl Ogren presented Homesteading As A Way of Life, describing their well-developed homesteads and their further goal of homestead community. The Ogrens have 150 acres organically handled at Rt. 1, Paw Paw, Mich. Another family is building on that land, and they welcome additional families to share with them.

Fred Wissing outlined a Natural Hygiene program; Refa Pos-

tel contributed greatly on improved functioning as creative human beings; Mildred Loomis presented Education for Living and Economic Causes of War. All shared in several unique discussion techniques, and some were heard to say, "We surely can count on a stimulating time and interesting people at School of Living affairs. We really must make sure we develop a regional School of Living here."

Ogren said, "I believe disastrous breakdown of our civilization is before us. I think we should use every bit of energy to get ourselves, families, communities and schools of living developed, to be of what help we can as this breakdown occurs."

How can we sit still and see perhaps the grandest, most romantic and unusual park on earth—the Grand Canyon—going the way of the rest? Above all how can we be still and let the whole of our earth be sprayed with poisons, no less poisonous to us than to the insects, though slower for the larger creatures and so not so noticeable. How tolerate, but also how prevent the silly explosions of bombs just to show we can?

More and more it feels as if we were all helpless morons in some institution where "experts" are "taking care of us" with poison. We dimly sense what is happening even as the dullest moron must. But we cannot find an effective way to take hold of so big a problem.

There seems nothing to do but try to live better, little-troubled family by little-troubled family, and to forget if we can all the useless waste, destruction, filth, cruelty, evasions, pretensions, lies or quibblings. Slowly, trust and patriotism melt away. And in the measure that these two emotions are lost are we all lost? Never to be found again in our time if, indeed, "time" in our sense continues at all.

No need for anybody to read Revelations; we will know it directly too soon anyhow. Or maybe it should be required reading.—June Burn, Florida

Sun Rise Community

To the Editor:

In June a group of some 20 adults and children came here to Bryce Ford's farm from the Intentional Community Conference held at the Maryland Center. A few have left; those remaining are constructing a building of stone, for our community building. We have somewhat crowded quarters at present, and have been struggling with most of the typical problems of a new community. On the whole I'm very happy about the way things are going. At present Bryce and Jan Ford own the land we're living on. We want to convert this as quickly as possible to ownership by a corporation, of which the community members will be the trustees. Advice on this will be appreciated.

Elaine and I will be in Berkeley, Calif., during the school year, but will return here next summer. We are glad for visitors and inquiries from prospective new members.

I will attend the workshop at

Enjoys Simple Format

To the Editor:

Because of the varying and for the most part, incisive viewpoints, in your *Green Revolution* and *A Way Out*, these two publications should be read by anyone interested in the decentralist and back-to-the-soil movements. I've enjoyed *A Way Out* and the scope of the magazine and its simple format. One issue stated that mimeographing was a temporary expedient. Why is a more elaborate issue needed since this one is readable? Simplicity should be your forte.—R. J. Fahey, Rt. 2, Oxford, N. Y.

Doubts Parent Teachers

To the Editor:

I think those people who think they are capable of teaching their children at home should try a classroom in a regular school and see how little they know about subject matter, social and psychological problems. I have not known a dozen parents in 30 years of teaching who could do an adequate job of home teaching. I'm amused by all this talk from parents who think they can do it. — Agnes Toms, Canyon Blvd., Monrovia, Calif.

Hutterian Community

To the Editor:

Perhaps your readers may be interested in our community made up of about 50 community-minded Christians. Forest River Community is a cooperative fellowship, associated with the Hutterian Community. (continued on page 4)
